

edge between the first and second rails, the carrier having a handle along the remaining edge, the first rail disposed with protruding pins at at least first and second locations along its length, the first location closer to the second electrical connector than the second location, the method comprising the steps of:

Cond  
A1

inserting the carrier partially into a first pair of guides;

while the carrier is being inserted, striking a protruding pin at the first location against a barrier at the fourth location, the first and second electrical connectors failing to be in contact.

#### REMARKS

This amendment is made solely to correct a typographical error due to a bug in the PASAT software used to prepare the XML version of this application for electronic filing.
